INSTRUCTIONS: Fill in the order form and email to sales@ensoftinc.com. Orders must be prepaid by either check, C.O.D., American Express, VISA, MasterCard, Discover, or wire transfer. Special handling or international shipments will be added to the total. Orders received after 4:00 pm CST will be processed the following day. Maintenance renewals have fees & small price increases with time after expiration. Prices shown are subject to change without prior notice.

BRIEF DESCRIPTION AND LOCAL NETWORK PRICING

LPILE

Analysis and design of drilled shafts, driven piles or auger-cast piles under lateral loads. Features multiple load combinations, LRFD, nonlinear pile materials, critical pile depth, etc. Provides deflection, moment, shear curves versus pile length.

- 2nd Single-User License (for same licensed site)700.00
- 3rd or more Single-User License (same licensed site).....500.00
- Local Network License (for one licensed site).....1,700.00

GROUP

Analysis of three dimensional groups of piles (drilled shafts, driven piles or auger-cast piles) under combined loadings (axial, lateral or torsional in multiple locations in rigid or flexible pile cap).

Standard (Rigid Cap) Version:

- 2nd Single-User License (for same licensed site)1,260.00
- 3rd or more Single-User License (same licensed site).....900.00
- Local Network License (for one licensed site).....3,060.00

Flexible Cap Version:

- 2nd Single-User License (for same location)1,750.00
- 3rd or more Single-User License (for same location)1,250.00
- Local Network License (for one licensed site).....5,950.00

SHAFT

Analysis of single drilled shafts (bored piles or auger-cast piles) under axial loadings. Provides axial capacity and short-term, load versus settlement curves of drilled shafts in various types of soils.

- 2nd Single-User License (for same licensed site)595.00
- 3rd or more Single-User License (same licensed site).....425.00
- Local Network License (for one licensed site).....1,445.00

APILE

Analysis of single driven piles under axial loadings. Provides axial capacity, as a function of depth, of a driven pile in clay, sand, or mixed-soil profiles. Also computes short-term, load-settlement curves for driven piles of specified lengths.

Incorporates Neutral Plane Analysis (Downdrag). Vertical or batter piles.

- 2nd Single-User License (for same licensed site)595.00
- 3rd or more Single-User License (same licensed site).....425.00
- Local Network License (for one licensed site).....1,445.00

Offshore Version:

- 2nd Single-User License (for same licensed site)875.00
- 3rd or more Single-User License (same licensed site).....625.00
- Local Network License (for one licensed site).....2,125.00

STABLPRO

Study of slope stability. General solution of slope stabilities using two-dimensional, limit-equilibrium method. Ensoft interface and maintenance of the popular STABL series developed at Purdue University in the 70s.

PYWALL

Analysis of flexible retaining wall systems (drilled shafts, sheet piles and soldier piles with or without tiebacks). As a difference to conventional practice, PYWALL considers soil-structure interaction by using a generalized beam-column model to analyze the behavior of flexible retaining walls.

- 2nd Single-User License (for same licensed site)595.00
- 3rd or more Single-User License (for same location).....425.00
- Local Network License (for one licensed site).....1,445.00

GeoMat

Analysis of soil-supported mats or structural slabs using FEM for the structure and linear springs (Winkler) for the soil.

EnCPT

Utility to quickly import, analyze & visualize Cone Penetration Test (CPT) data to create soil layering and properties for use in LPILE (v2019).

- 2nd Single-User License (for same licensed site)315.00
- 3rd or more Single-User License (same licensed site).....225.00
- Local Network License (for one licensed site).....765.00

EnFEM

General purpose 2D finite element analysis for soil-structure interaction and staged construction.

DynaN

Analysis of pile groups or mat foundations under dynamic loadings (earthquake and/or harmonic loadings) using Novak's methods.

DynaPile

Analysis of pile groups under dynamic loadings (earthquake and/or harmonic loadings) using FEM and boundary elements.

DynaMat

Analysis of mat foundations under dynamic loadings (earthquake and/or harmonic loadings) using FEM and boundary elements.

TZPILE

Computation of short-term, load-settlement curves for axially-loaded piles (driven piles, drilled shafts or auger-cast piles) with or without downdrag. Methods of soil-structure interaction based on $t-z$ and $Q-w$ curves are used in the internal computations. (*Pricing similar to PYWALL*).

GRLWEAP

Dynamic analyses of driven piles, used to determine pile drivability.

ATENA

Advanced tool for engineering nonlinear analysis of concrete and reinforced concrete structures using nonlinear FEM in 2D or 3D models.
